

CARBON FOOTPRINT

At Gres Aragón and Faveker, we have calculated the organization's carbon footprint in accordance with ISO standard 14064-1:2019 and the Greenhouse Gas Protocol as part of our sustainability strategy which is one of the primary cornerstones of our ceramic product manufacturing operations.

Knowing the impact of the greenhouse gas emissions (GHG) directly or indirectly caused by a product, organization or service helps identify the areas that contribute the most to climate change and act on them to minimize emissions, identifying risks and opportunities associated with climate change and its potential impacts on strategic goals.

GRES ARAGÓN - FAVEKER hereby declares the following emissions for the year 2021:

0.257 t CO2/t product

The calculation was done by the consulting firm Factor CO2.

The emissions data were evaluated in accordance with the requirements of standard UNE ISO 14021:2017, Environmental labels and declarations - Self-declared environmental claims (Type II environmental labelling).
