

CARBON FOOTPRINT - 2023

At Gres Aragón and Faveker, we have calculated the organization's Carbon Footprint under the ISO 14064-1:2019 standard and the Greenhouse Gas (GHG) Protocol, in line with our sustainability strategy, which stands out as one of the pillars supporting our ceramic product manufacturing activities.

Understanding the impact of greenhouse gas (GHG) emissions caused directly or indirectly by a product, organization, or service allows for the identification of areas that most contribute to climate change and enables actions to minimize emissions. It also helps in identifying risks and opportunities associated with climate change and its potential impacts on strategic objectives.

GRES ARAGON declares the following emissions for the year 2023:

The emission data has been evaluated under the requirements of the UNE ISO 14021:2017 standard, eco-labels and environmental declarations, self-declared environmental claims (Type II eco-labeling).
